

## AMENDMENTS TO THE CLAIMS

1. (Currently amended) A method implemented in a computer device for processing an available inventory item query corresponding to inventory items defined by inventory information, the method comprising:

storing a set of available inventory information according to a three level hierarchy, wherein the three level hierarchy includes:

at least one group record defining a first level of detail for inventory information, wherein the first level of detail of each group record comprises information common to all item category records and inventory records below the group record in the hierarchy;

a set of item category records defining a second level of detail that is associated to a referenced group record and corresponds to types of inventory items for the referenced group, wherein the second level of detail of each item category record comprises information common to all inventory records below the item category record in the hierarchy;

inventory records defining a third level of detail corresponding to instances of inventory item types referenced by at least two of the set of item category records, wherein the third level of detail of each inventory record in the hierarchy describes distinct instances of inventory items than that of another inventory record, the distinct instances of inventory items including price with price adjustments applied to the price;

obtaining, by the computer device, an available inventory query, the query including a set of criteria;

determining at least one inventory item matching the query criteria; and

transmitting matching group record, item category record, and inventory record data for the matching inventory item.

2. (Previously presented) The method as recited in Claim 1, wherein determining at least one inventory item includes identifying all inventory items matching the query criteria, wherein each identified inventory item corresponds to a group record, record, and inventory record.

3. (Previously presented) The method as recited in Claim 1, wherein determining at least one inventory item includes applying a supplier limitation of use to select a corresponding group record, record, and inventory record.

4. (Previously presented) The method as recited in Claim 1, wherein determining at least one inventory item includes applying a consumer selection limitation of use to select a corresponding group record, record, and inventory record.

5. (Previously presented) The method as recited in Claim 1 further comprising processing the data associated with the identified group record, record, and inventory records prior to transmitting the data.

6. (Previously presented) The method as recited in Claim 5, wherein the instances of inventory items includes price and wherein processing the data includes generating a price corresponding to the set of query criteria.

7. (Original) The method as recited in Claim 6, wherein generating a price includes generating an ordered list of prices for one or more inventory items.

8. (Original) The method as recited in Claim 6, wherein generating a price includes applying any date based price adjustments based on a current date or date of use.

9. (Original) The method as recited in Claim 8, wherein the date based price adjustment is a tax rate computed by a date of use.

10. (Original) The method as recited in Claim 8, wherein the date based price adjustment is a service charge computed by a date of use.

11. (Original) The method as recited in Claim 8, wherein the date based price adjustment is an extra person charge computed by a date of use.

12. (Original) The method as recited in Claim 8, wherein the date based price adjustment is a point of sale variance computed by a date of use.

13. (Original) The method as recited in Claim 5, wherein processing data includes determining an inventory availability corresponding to the set of query criteria.

14. (Original) The method as recited in Claim 1, wherein the inventory includes travel-based goods and services and wherein the available inventory query includes an available travel-based goods and services query.

15. (Original) The method as recited in Claim 14, wherein the query criteria include a date or date range.

16. (Original) The method as recited in Claim 15, wherein the date or date range is selected by a graphical user interface.

17. (Original) The method as recited in Claim 14, wherein the query criteria include a selection of a destination.

18. (Original) The method as recited in Claim 14, wherein the query criteria include a selection of a hotel or hotel room-type.

19. (Original) The method as recited in Claim 14, wherein the query criteria include the selection of an airline or airline flight.

20. (Original) The method as recited in Claim 14, wherein the query criteria include a selection of a cruise or cabin type.

21. (Original) The method as recited in Claim 14, wherein the query criteria include a selection of a car rental vendor or car type.

22. (Original) The method as recited in Claim 1, wherein the available inventory query is a user-specified, available inventory query.

23. (Canceled)

24. (Previously presented) A computer-readable medium having computer-executable instructions operable for performing the method recited in any one of Claims 1-22.

25. (Previously presented) A computer system having a processor, a memory, and an operating environment, the computer system operable for performing the method recited in any one of Claims 1-22.

26. (Currently amended) A method implemented by a computer device for processing an inventory action request corresponding to one or more inventory items defined by inventory information, the method comprising:

storing a set of available inventory information according to a three level hierarchy, wherein the three level hierarchy includes:

at least one group record defining a first level of detail for inventory information, wherein the first level of detail of each group record comprises information common to all item category records and inventory records below the group record in the hierarchy;

a set of item category records defining a second level of detail that is associated to a referenced group record and corresponds to types of inventory items for the referenced group, wherein the second level of detail includes date information associated with the inventory items, and wherein the second level of detail of each item category record comprises information common to all inventory records below the item category record in the hierarchy;

inventory records defining a third level of detail corresponding to instances of inventory item types referenced by the set of item category records, wherein the third level of detail of each inventory record in the hierarchy describes distinct inventory instances of item types than that of another inventory record, the distinct inventory instances of item types including price with price adjustments applied to the price;

obtaining, by the computer device, an inventory action request, the inventory action request including an identification of at least one specific group record, item category record, and inventory record;

processing the inventory action request; and

transmitting the results of the processing of the inventory action request.

27. (Original) The method as recited in Claim 26, wherein obtaining the inventory action request includes obtaining a supplier request for inventory action.

28. (Original) The method as recited in Claim 26, wherein obtaining an inventory action request includes:

issuing an inventory action request to a supplier; and  
obtaining a supplier confirmation inventory action request.

29. (Currently amended) [[The]] A method as recited in Claim 26, implemented by a computer device for processing an inventory action request corresponding to one or more inventory items defined by inventory information, the method comprising:

storing a set of available inventory information according to a three level hierarchy, wherein the three level hierarchy includes:

at least one group record defining a first level of detail for inventory information, wherein the first level of detail of each group record comprises information common to all item category records and inventory records below the group record in the hierarchy;

a set of item category records defining a second level of detail that is associated to a referenced group record and corresponds to types of inventory items for the referenced group, wherein the second level of detail includes date information associated with the inventory items, and wherein the second level of detail of each item category record comprises information common to all inventory records below the item category record in the hierarchy;

inventory records defining a third level of detail corresponding to instances of inventory item types referenced by the set of item category records, wherein the third level of detail of each inventory record in the hierarchy describes distinct inventory instances of item types than that of another inventory record;

obtaining, by the computer device, an inventory action request, the inventory action request including an identification of at least one specific group record, item category record, and inventory record;

processing the inventory action request; and  
transmitting the results of the processing of the inventory action request;

wherein the inventory action request includes a supplier batch inventory action request, the batch inventory action request including an identification of one or more group records, item category records, inventory records, and inventory modification data, and wherein processing the inventory action request includes:

identifying at least one group record, item category record, and inventory record corresponding to the batch inventory action request; and

updating the identified at least one group record, item category record, and inventory record with the inventory modification data from the batch inventory action request.

30. (Original) The method as recited in Claim 29, wherein the modification data includes a cost code indicative of a supplier cost.

31. (Original) The method as recited in Claim 29, wherein the modification data includes data indicating a maximum price that may be charged for the inventory item.

32. (Previously presented) The method as recited in Claim 29 further comprising transmitting a confirmation of the updating of the at least one inventory record.

33. (Previously presented) The method as recited in Claim 29 further comprising generating one or more inventory records corresponding to the identification data included in the batch inventory action request if no inventory records corresponding to the batch inventory action request can be identified.

34. (Previously presented) The method as recited in Claim 29 further comprising generating one or more item category records corresponding to the identification data included in

the batch inventory action request if no item category records corresponding to the batch inventory action request can be identified.

35. (Previously presented) The method as recited in Claim 26, wherein the inventory action request includes a supplier inventory query action request, the supplier inventory query including one or more query criteria, and wherein processing the inventory action request includes:

determining at least one category item record and inventory record matching the query criteria; and

transmitting data associated with the matching category item record and inventory records to an associated supplier.

36. (Previously presented) The method as recited in Claim 29 further comprising filtering the data associated with the matching category item record and record inventory records prior to transmitting the data.

37. (Previously presented) The method as recited in Claim 36, wherein the filtered data associated with the matching category item record, and inventory records includes utilization data corresponding to inventory items represented by the matching records.

38. (Previously presented) The method as recited in Claim 36, wherein the filtered data associated with the matching category item record, and inventory records includes a supplier cost associated with inventory items represented by the matching records.

39. (Original) The method as recited in Claim 26, wherein the inventory includes travel-based goods and services, and wherein the inventory action request is a travel-based goods and services inventory action request.

40. (Canceled)

41. (Previously presented) The method as recited in Claim 26 further comprising generating one or more group records corresponding to the identification data included in the batch inventory action request if no group records corresponding to the batch inventory action request can be identified.

42. (Previously presented) A computer-readable medium having computer-executable instructions for performing the method recited in any one of Claims 26-39 and 41.

43. (Previously presented) A computer system having a processor memory in an operating environment, the computer system operable to perform the method recited in any one of Claims 26-39 and 41.

44. (Currently amended) A computer-readable medium having computer-readable components for managing and storing one or more inventory items defined by inventory information according to a three level hierarchy comprising:

at least one group component operable to define a first level of characteristics for inventory information, wherein the first level of characteristics of each group record comprises item characteristics common to all item category records and inventory records below the group record in the hierarchy;

a set of item category components operable to define a second level of detail that is associated to a referenced group component and corresponds to types of inventory items for the referenced group, wherein the second level of detail includes date information associated with the inventory items and further includes item characteristics common to all inventory records below the item category record in the hierarchy; and

inventory components corresponding to instances of inventory item types referenced by at least two of the set of item category components and operable to define a third level of characteristics for an inventory item, the instances of inventory item types including price with price adjustments applied to the price.

45. (Previously presented) The computer-readable medium as recited in Claim 44, wherein the first level of characteristics includes date based characteristics.

46. (Original) The computer-readable medium as recited in Claim 45, wherein the first level of characteristics defines extra person charges.

47. (Original) The computer-readable medium as recited in Claim 45, wherein the first level of characteristics defines service charges.

48. (Previously presented) The computer-readable medium as recited in Claim 45, wherein the first level of characteristics defines a cancellation and change penalty.

49. (Previously presented) The computer-readable medium as recited in Claim 44, wherein the second level of characteristics includes a specification of a base cost associated with the inventory component.

50. (Original) The computer-readable medium as recited in Claim 49, wherein the base cost includes a stand alone cost.

51. (Original) The computer-readable medium as recited in Claim 49, wherein the base cost includes a package cost.

52. (Previously presented) The computer-readable medium as recited in Claim 44, wherein the second level of characteristics includes a specification of a base price associated with the inventory component.

53. (Original) The computer-readable medium as recited in Claim 52, wherein the base cost includes a stand alone price.

54. (Original) The computer-readable medium as recited in Claim 53, wherein the base cost includes a package price.

55. (Previously presented) The computer-readable medium as recited in Claim 44, wherein the second level of characteristics include a specification of a date of existence associated with the inventory component.

56. (Previously presented) The computer-readable medium as recited in Claim 44, wherein the second level of characteristics include a specification of a limitation of use associated with the inventory component.

57. (Previously presented) The computer-readable medium as recited in Claim 56, wherein the limitation of use is a consumer limitation of use.

58. (Original) The computer-readable medium as recited in Claim 57, wherein the limitation of use includes a number of consecutive days an inventory item must be reserved.

59. (Original) The computer-readable medium as recited in Claim 57, wherein the limitation of use includes limitations on what dates an inventory item reservation may begin.

60. (Original) The computer-readable medium as recited in Claim 57, wherein the limitation of use includes limitations on what dates an inventory item reservation may end.

61. (Original) The computer-readable medium as recited in Claim 57, wherein the limitation of use includes a condition that must be satisfied prior to the availability of the inventory item.

62. (Original) The computer-readable medium as recited in Claim 56, wherein the limitation of use is a supplier limitation of use.

63. (Original) The computer-readable medium as recited in Claim 62, wherein the limitation of use is allotment selling order restriction.

64. (Original) The computer-readable medium as recited in Claim 44, wherein the one or more inventory items are travel-based goods and services inventory items.

65. (Canceled)

66. (Previously presented) The computer-readable medium as recited in Claim 44, wherein the first level of characteristics includes a point of sale adjustment.

67. (Previously presented) The computer-readable medium as recited in Claim 44, wherein the first level of characteristics includes taxes or taxation rates.

68. (Original) The computer-readable medium as recited in Claim 67, wherein the taxes or taxation rates are date based characteristics.

69. (Previously presented) The computer-readable medium as recited in Claim 44, wherein the group component is representative of a hotel, wherein the item category component

is representative of a hotel room type and wherein the inventory component is representative of the hotel room type on a specified date.

70. (Previously presented) The computer-readable medium as recited in Claim 44, wherein the group component is representative of a car rental vendor location, wherein the item category component is representative of a car type, and wherein the inventory component is representative of a car type on a specified date.

71. (Previously presented) The computer-readable medium as recited in Claim 44, wherein the group component is representative of a cruise ship, wherein the item category component is representative of a cabin type, and wherein the inventory component is representative of the cabin type of a specified embarkation rate.

72. (Currently amended) A system for managing inventory utilizing inventory information, the system comprising:

at least one client computing device operable to issue an inventory query, the query including a set of criteria;

a travel server operable to store one or more inventory items defined by inventory information in a three level hierarchy, wherein the three level hierarchy includes:

at least one group record defining a first level of detail for inventory information, wherein the first level of detail of each group record comprises information common to all item category records and inventory records below the group record in the hierarchy;

a set of item category records defining a second level of detail that is associated to a referenced group record and corresponds to types of inventory items for the referenced group, wherein the second level of detail of each item category record comprises information common to all inventory records below the item category record in the hierarchy;

inventory records defining a third level of detail corresponding to instances of inventory item types referenced by at least two of the set of item category records, wherein the third level of detail of each inventory record in the hierarchy describes distinct instances of inventory items than that of another inventory record, the distinct instances of inventory items including price with price adjustments applied to the price; and

wherein the travel server is operable to identify one or more group records, item category records, and inventory records matching the inventory query criteria submitted by the client computing device.

73. (Original) The system as recited in Claim 72 further comprising at least one inventory unit supplier operable to provide the one or more inventory items by communicating with the travel server.

74. (Original) The system as recited in Claim 73, wherein the inventory unit supplier provides a cost code associated with the base costs of the inventory item.

75. (Original) The system as recited in Claim 72, wherein the one or more inventory items include travel-based goods and services and wherein the inventory query includes a travel-based goods and services query.

76. (Original) The system as recited in Claim 75, wherein the query criteria include a date or date range.

77. (Original) The system as recited in Claim 76, wherein the date or date range is selected by a graphical user interface.

78. (Original) The system as recited in Claim 75, wherein the query criteria include the selection of a hotel or hotel room-type.

79. (Original) The system as recited in Claim 75, wherein the query criteria include the selection of an airline carrier or airline flight.

80. (Original) The system as recited in Claim 75, wherein the query criteria include the selection of a cruise or a cabin type.

81. (Canceled)

82. (Currently amended) A system for storing and managing one or more inventory items utilizing inventory information, the system comprising:

at least one inventory supplier operable to provide the one or more inventory items;

a travel server operable to store one or more inventory items defined by inventory information in a three level hierarchy, wherein the three level hierarchy includes:

at least one group record defining a first level of detail for inventory information, wherein the first level of detail of each group record comprises information common to all item category records and inventory records below the group record in the hierarchy;

a set of item category records defining a second level of detail that is associated to a referenced group record and corresponds to types of inventory items for the referenced group, wherein the second level of detail includes date information associated with the inventory items, wherein the second level of detail of each item category record comprises information common to all inventory records below the item category record in the hierarchy;

inventory records defining a third level of detail corresponding to instances of inventory item types referenced by the set of item category records, wherein the third level of

detail of each inventory record in the hierarchy describes distinct instances of inventory items than that of another inventory record, the distinct instances of inventory items including price with price adjustments applied to the price; and

wherein the travel server is operable to communicate with the inventory suppliers and process inventory action requests corresponding to the one or more group records, item category records, and inventory records.

83. (Original) The system as recited in Claim 82, wherein the one or more inventory items and travel-based goods and services and wherein the inventory action request includes a travel-based goods and services inventory action request.

84. (Previously presented) The system as recited in Claim 83, wherein the inventory action request includes the transmission of a batch inventory unit request, and wherein the travel server processes the batch inventory unit request according to the item category record and inventory records.

85. (Previously presented) The system as recited in Claim 83, wherein the inventory action request includes the transmission of an inventory status query and wherein the travel server processes the inventory status query according to the item category record and inventory records.

86. (Original) The system as recited in Claim 85, wherein the travel server processes the inventory status query to include utilization information.

87. (Original) The system as recited in Claim 82, wherein the travel server is further operable to initiate an inventory action request and transmit the inventory action request to the inventory supplier.

88. (Original) The system as recited in Claim 82, wherein at least one inventory supplier is not continuously connected to the system and wherein the travel server transmits a confirmation for all inventory action requests.

89. (Canceled)
